To Devin Standard

Hi Devin,
As long as they are not larger than the existing ones size-wise and see well enough, I am open to suggestions. For example, the design of the attached ones is unacceptable because the focusing is achieved by moving the entire lens assembly, but they are not ITAR-restricted, acceptable quality-wise, and inexpensive, so something similar but with focusing done by moving only the rear lens would work for us.
Best, Naum

Hi Naum:
A) These curves represent the 100mm lenses we will produce at the current price point.
B) What would the specs be for the Euro lenses? We would certainly be interested in quoting them for you.
Talk to you soon.
Devin

Hi Devin,
Before we look into this, which is likely to require some quality concessions, I need to know what cost benefit these concessions will produce. Also, we would like to sell some types of thermal cameras in Europe and would like to know if your company is interested in supplying non-ITAR lenses for them, otherwise I will have them designed and then made for us in China or Singapore.
Best wishes, Naum
